Table of Contents

1.Executive Summary	2
Overview of the dataset, methodology, and key findings.	
2.Sales Overview	3
Revenue trends, order volumes, top products, and returns analysis.	
3.Customer Insights	4
Customer segmentation, new vs repeat buyers, and Pareto effect.	
4.Regional Insights	5
Country-level sales performance, return rates, and regional trends.	
5.Conclusion & Recommendations	6
Key takeaways and strategies for growth, retention, and risk reduction.	

Executive Summary

This project analyzes over 824,000 retail transactions to uncover insights across sales performance, customer behavior, and regional trends.

The dashboards provide a clear view of KPIs including total sales, orders, customer segmentation, and returns.

Key Highlights:

- The United Kingdom is the top contributor to revenue and orders.
- Repeat customers account for the majority of revenue, while one-time buyers represent a smaller share.
- Returns vary significantly by country, with Singapore and Malta showing higher return rates.
- Top-performing products drive a large portion of overall sales, creating opportunities for targeted promotions.

Sales Overview

This dashboard tracks overall revenue trends, order volumes, and product performance. It highlights both historical trends and current month/year-to-date metrics.

Key Insights:

- Total sales reached 16.65M across 44.9K orders, with over 10M items sold.
- Sales show seasonal peaks, especially in late 2010 and 2011.
- The average order value is 371, indicating consistent spending per transaction.
- Top 10 products contribute heavily to overall revenue, dominated by home décor and accessories.
- Returns vs Sales analysis shows consistent return activity that impacts overall sales.

Sales Overview Dashboard

Customer Insights

This dashboard focuses on customer behavior: segmentation, repeat purchases, and revenue contribution.

Key Insights:

- The dataset includes 5.9K unique customers, of which 4.4K are repeat buyers.
- Repeat customers drive significantly more sales compared to one-time buyers (1.46K).
- On average, customers place 7.5 orders each and spend around 2.8K.
- A small group of customers contributes disproportionately high revenue (e.g., top customers generating over 500K each).
- The Pareto analysis shows that about 20% of customers generate nearly 80% of sales.

Customer Insights Dashboard

Regional Insights

This dashboard compares sales and returns across countries to evaluate regional performance.

Key Insights:

- The business operates across 41 countries, with the UK contributing the largest share of sales.
- Average sales per country is 406K, but performance is highly uneven across regions.
- Returns are highest in Singapore (0.92), Malta (0.56), and Norway (0.53), highlighting potential quality or logistics issues.
- The Top 5 Countries Trend shows that the UK consistently outperforms other countries across time.
- Monthly Sales by Country highlights strong year-end seasonality in most markets.

Conclusion & Recommendations

The dashboards confirm that:

- Retention is critical — repeat customers generate most revenue.
- Top products and top regions account for the majority of sales, making them key growth levers.
- Returns in specific countries should be investigated to improve profitability.

Recommendations:

1. Invest in loyalty programs to strengthen repeat customer spending.
2. Replicate UK's sales strategies in other markets like Germany and France.
3. Investigate high-return countries (e.g., Singapore, Malta) to reduce operational losses.
4. Leverage top-selling products with regional promotions to boost underperforming countries.
